

How to install Nutrient Expert in Android 6

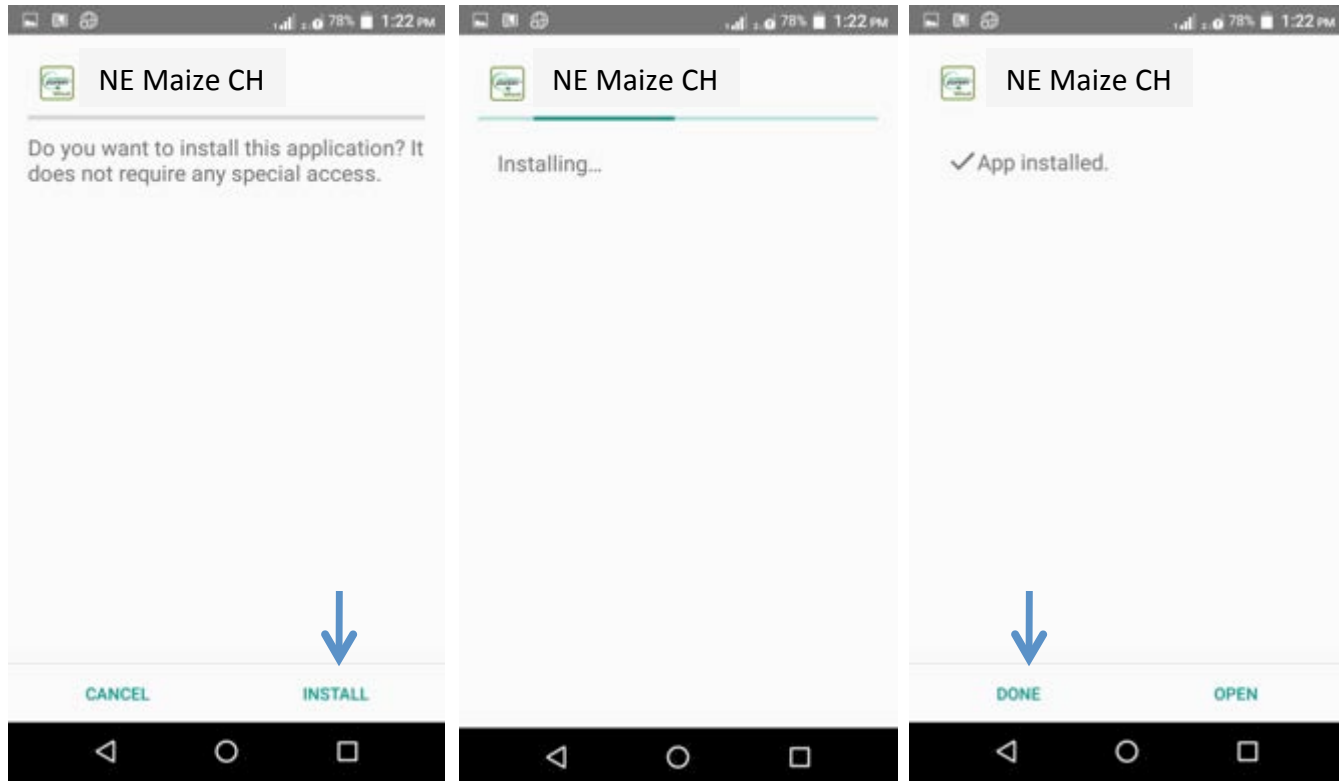

Android 6 has extra settings that need to be altered for Nutrient Expert (NE) to run and gives users the ability to deny access to certain phone features. This becomes problematic as most apps are set to do automatic denial of major permissions.

Go to 'apk' directory and open 'apk' file

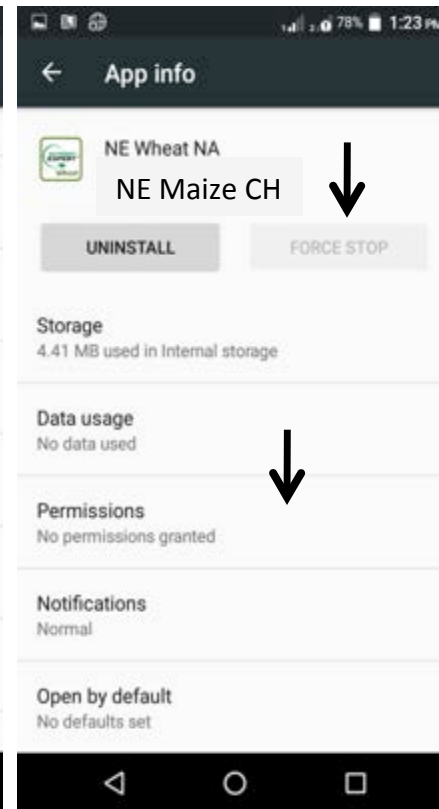

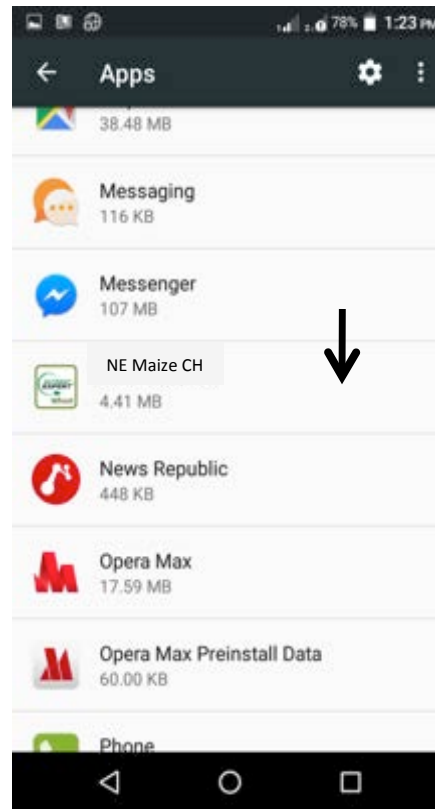

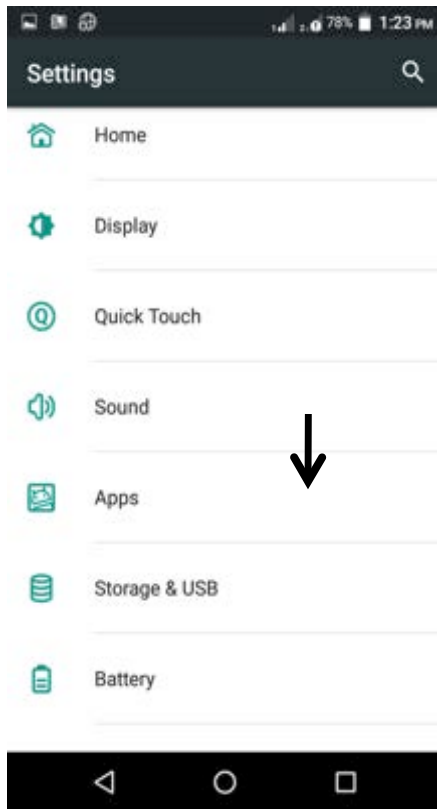

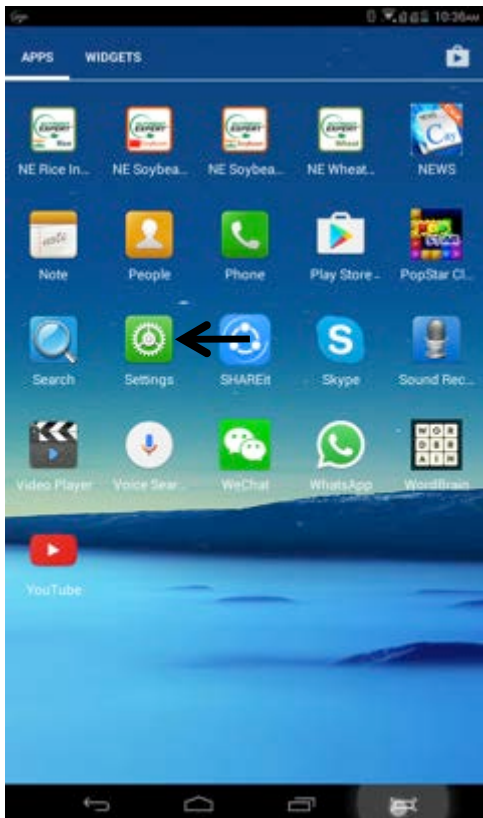

How to install NE in Android 6

Apk installer should run and do usual installation window. After installation, DO NOT immediately open NE, press 'DONE' button.

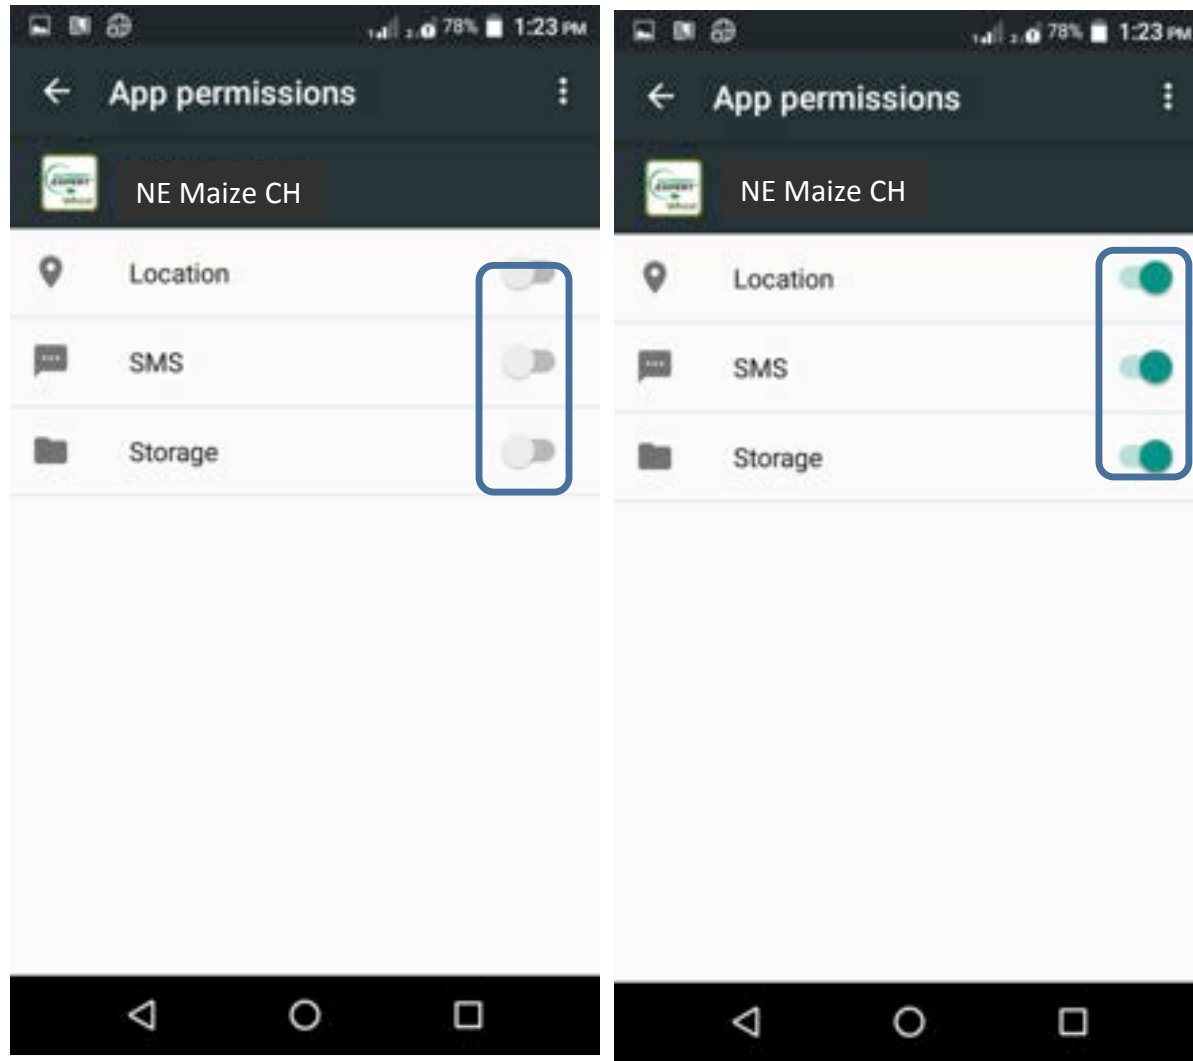

How to install NE in Android 6

After installation go to Settings > App manager ('Apps' in this sample phone screen shot) > NE App settings > Permissions. If NE is running make sure to click "Force stop", (if "Force stop" button is not disabled make sure to click it)

How to install NE in Android 6

By default every major permission is denied in Android 6, NE uses 3 major permissions and must be enabled manually.

How to install NE in Android 6

The same procedure needs to be done for every NE installed, but once an installed NE has been granted permission it will no longer need to be granted same permissions for the next updates.
